

The screenshot shows a web-based IDE interface. At the top, there's a navigation bar with a back arrow, a search icon, and the URL 'replit.com/@sathanathorn/ImageHello#src/HelloWorld.java'. Below this is a toolbar with a play button, a progress bar, and an 'Upgrade' button. The main workspace is divided into two panes. The left pane shows a code editor with the following Java code:

```
public class HelloWorld {
    public static void main(String[] args) {
        System.out.println("HELLO JAVA");
    }
}
```

The right pane shows the console output, which displays 'HELLO JAVA' in large, blocky, brown characters. Below the code editor, there's a 'src' folder containing 'HelloWorld.java'. At the bottom of the interface, there's a status bar showing 'Agent is ready' and 'Make anything...'. On the far right, there's a sidebar with a 'HelloWorld.java' file icon and a '+' button.
